

# Release Note for VigorAP 910C

Firmware Version:	1.2.3.2
Release Type:	Normal
Applied Models:	VigorAP 910C

VigorAP 910C is a ceiling mount Access Point with PoE for offering power supply and support 300Mbps @2.4GHz, and 866Mbps @5GHz (11ac).

## New Features

- None.

## Improvement

- Improved: A wireless vulnerability, known as 'KRACK' was discovered in October 2017. This affected wireless clients, including phones, tablets, laptops and also any wireless base acting as a client.  
For full details, see <https://www.krackattacks.com>. The recommended action in all cases is to upgrade your client devices as that is where the vulnerability lies however if that is impossible because the product is too old or the vendor does not provide updates, it is possible to mitigate KRACK exploitation by disabling EAPOL-Key retries on the base station and reduce the possibility of KRACK being used. For more details, see <https://www.krackattacks.com/#ap-mitigations>. That can be done from "Wireless LAN >> Security Settings" on the access point. Upgrading your client is still the preferable solution.

## Known Issue

- None.

## Notes

- To enhance the security among wireless clients, the SSIDs on the different bands (2.4GHz / 5GHz) will be isolated. That is, wireless clients with different bands can not communicate with each others even they are on the same subnet.
